

Online Appendix: Data Sources

For each market, the entry first gives a description of the data and period coverage, followed by printed and/or archival sources.

Aachen: 20 interest rates on life annuities yielding six yearly means (1385–1439).

Kraus, T.R. (ed.) (2004): *Die Aachener Stadtrechnungen des 15. Jahrhunderts*, Düsseldorf, pp. 42, 57, 93, 168.

Laurent, Josef (ed.) (1866): *Aachener Stadtrechnungen aus dem XIV. Jahrhundert nach den Stadtarchiv-Urkunden mit Einleitung, Registern und Glossar*, Aachen, pp. 295, 369.

Amiens: three (four) interest rates on heritable annuities yielding two yearly means (1316 and 1494) and one interest rate on a life annuity yielding one yearly mean (1388). One heritable annuity was excluded from the yearly means computations as it referred to a forced loan.

Espinias, G. (1902): *Les finances de la commune de Douai, des origines au XVe siècle*, Paris, pp. 321, 328.

Maugis, M. E. (1899): Essai sur le Régime Financier de la Ville d'Amiens du à la fin du XVI siècle (1356-1588), in: *Mémoires de la Société des Antiquaires de Picardie*, Quatrième Serie, Tome III, pp. 133–656, here pp. 563, 566.

Amsterdam: 844 interest rates on heritable annuities yielding 36 yearly means (1515–1795) and 1301 (2183) interest rates on life annuities yielding 36 yearly means (1543–1651). Life annuities are excluded from mean calculations when they are on two lives and when they are redeemable (since this implies a lower illiquidity premium and hence rate of return than the standard, irredeemable, life annuities). In the combined data, the yearly means on life annuities are divided by 1.89 (the average rate in years when both life and heritable annuities were issued; the rate is somewhat variable, but stationary).

Fritschy, W. (2003a): Three centuries of urban and provincial public debt: Amsterdam and

Holland, in: M. Boone / K. Davids / P. Janssens (eds.): *Urban Public Debts: Urban Government and the Market for Annuities in Western Europe (14th–18th Centuries)*, Turnhout, pp. 75–92, here pp. 79, 83.

Tracy, J. D. (1985): *A Financial Revolution in the Habsburg Netherlands: Renten and Renteniers in the County of Holland, 1515–1565*. Berkeley, Los Angeles and London, here pp. 45, 60, 133.

Van der Burg, M. / Hart, M. (2003): Renteniers and the recovery of Amsterdam's credit (1578–1605), in: M. Boone / K. Davids / P. Janssens (eds.): *Urban Public Debts: Urban Government and the Market for Annuities in Western Europe (14th–18th Centuries)*, Turnhout, pp. 197–218, here pp. 200, 204.

Frankfurt am Main: 714 interest rates on heritable annuities yielding 110 yearly means (1546–1766) and 31 interest rates on life annuities yielding 14 yearly means (1561–1599).

Institut für Stadtgeschichte Frankfurt am Main [City Archives Frankfurt am Main]: Rechneiamt Bücher (1341–1889): Nos. 715–6, 830–51.

Freiburg (Breisgau): 105 interest rates on heritable annuities yielding 44 yearly means (1441–1633) and 26 interest rates on life annuities yielding 13 yearly means (1561–1568). Four rates on annuities on two lives have been used to compute the yearly means on life annuities as they payout on the second life was lower than on the first life and the rates were close to other rates paid on life annuities at the same time. In the combined dataset the mean rates on life annuities are 12

divided by 2.06 (average ratio).

Stadtarchiv Freiburg [Freiburg City Archives]: C1 Akten der städtischen Hauptverwaltung (bis ca. 1860): Gemeindevermögen, vols. 12, 14, 22; E1 Städtische Rechnungen, A I b Städtisches Rentamt, Separat-Rechnung: AI b.1 Einnahmbücher 1538/39, 1541–1545, 1548–1550, 1552, 1554, 1558–1561, 1568, 1633; AI b.2 Ausgabebücher 1520, 1566, 1569/70, 1572/73, 1575/76, 1597, 1600, 1602, 1604.

Genoa: 550 (881) interest rates on heritable annuities (which include 30 (273) secondary market yields computed with price data) yielding 175 yearly means (1263–1784) and four interest rates on life annuities yielding four yearly means (1630–1683).

Groningen: Four interest rates on heritable annuities yielding three yearly means (1706–1790) and five interest rates on life annuities yielding five yearly means (1666–1669). The data for the province of Groningen was treated as the market of Groningen. Intervals given for the published data (i.e. 1666–1669) were assumed to refer to constant interest rates. In the combined dataset, the mean rates on life annuities were divided by 2, as implied by data in years when both life and heritable annuities were issued in Groningen and neighbouring provinces.

van der Ent, L. / Enthoven, V. (2001): *Gewestelijke financiën ten tijde van de Republiek der Verenigde Nederlanden. Deel 3: Groningen (1594–1795)*. Rijks Geschiedkundige Publicatiën uitgegeven door het Instituut voor Nederlandse Geschiedenis. Kleine Serie, Vol. 94, Den Haag, Table III.5.42, pp. 285–6.

Göttingen: 114 interest rates on heritable annuities yielding 40 yearly means (1328–1650) and 64 interest rates on life annuities yielding 28 yearly means (1320–1440). To calculate the meanrate for life annuities the rate on two or three lives was multiplied by 1.24 (average, used only when 1 life is missing; there didn't seem to be a difference between rates for 2 or 3 lives). In the combined data-set, mean rates on life annuities were divided by 1.59 (average ratio, pretty stable).

Hamburg: 1984 interest rates on heritable annuities yielding 271 yearly means (1344–1809) and 120 interest rates on life annuities yielding 50 yearly means (1361–1530). The mean rates for life annuities have been calculated using the following ratios: rate on 2 lives in 1435–1436 & 1452–1453 =rate on 1 life/1.20 as mode in 1375–1471; rate on 2 lives in 1478, 1501–1502=rate on 1 life as mode in 1473–1485; rate on 2 lives in 1527, 1529–1530=rate on 1 life/1.15 as in 1488. In the combined data-set, mean rates on life annuities in 1361, 1368, 1375 and 1390 were divided by 1.56 (average ratio in 1373–1441). The mean in 1449 was divided by 1.22 (average ratio in 1448–1502).

Hanover: 1063 interest rates on heritable annuities yielding 302 yearly means (1315–1723) and 569 interest rates on life annuities yielding 121 yearly means (1355–1606). Rates on multiple lives have been included as in this case they were very similar to rates on life annuities. In the combined data-set, the yearly means on life annuities were divided by 1.72 in 1427–1468 (average in those years; before too idiosyncratic), by 2.08 in 1469–1532 (average in those years), by 2 in 1543–1545 (as in 1540).

Stadtarchiv Hannover [Hanover City Archives]: Urkunden-Abteilung 1: Allgemeine Urkundensammlung (14.–18. Jh.). Hildesheim: 559 interest rates on heritable annuities yielding 72 yearly means (1333–1600) and 246 (248) interest rates on life annuities yielding 54 yearly means (1328–1564). Rates on multiple lives were used to extrapolate the rates for life annuities (differences negligible in overlapping years, less than 0.25 in overlapping years and mostly much less). In the combined dataset, yearly means on life annuities were divided by 1.81 (average, stationary from 1333).

Stadtarchiv Hildesheim [Hildesheim City Archives]: Bestand 1 Nr. 1275: Schuldverschreibungen. Nos. 1275a-zzzz; Bestand 50 Nr. 159: Kämmereirechnungen. Symcox, G. (1983): *Victor Amedeus II: Absolutism in the Savoyard State 1675–1730*, London, p. 201.

Udine: Four interest rates on heritable annuities yielding four yearly means (1556–1578). The rate on short-term annuities were converted to rate on long-term annuities by dividing them by multiplying them by 1.25, as implied by data in sixteenth-century Verona (very similar to sixteenth-century Venice, too).

Tagliaferri, A. (1969): *Struttura e Politica Sociale in una Comunità Veneta del '500 (Udine)*, Milano, pp. 169, 180–1.

Utrecht: One interest rate on a heritable annuity yielding 1 yearly mean (1668).

Verstegen, S.W. (2006): *Gewestelijke financiën ten tijde van de Republiek der Verenigde Nederlanden. Deel 5: Utrecht (1579–1798)*, Rijks Geschiedkundige Publicatiën uitgegeven door het Instituut voor Nederlandse Geschiedenis. Kleine Serie, Vol. 105, Den Haag, Table III.5.44, p. 142.

Venice: 591 (1139) interest rates on heritable annuities (which include 385 (526) secondary market yields computed with price data) yielding 201 yearly means (1285–1789) and 23 (26) interest rates on life annuities yielding 12 yearly means (1538–1715). In the computation of the yearly means on heritable annuities, the rates on annuities with a term of less than 10 years have been multiplied by 1.26 and those on long-term annuities not returning the capital have been divided by 1.785. In the computation of the yearly means on life annuities the rates on annuities for one life and 10 years have been multiplied by 1.29. In the combined data-set, the yearly means

on life annuities have been divided by 1.75.
