

**Supplementary Files for „Trends in the Gender Wage Gap in the US - A replication study of Blau and Kahn (Journal of Economic Literature 2017)”
by Matthias Collischon**

The data that Blau and Kahn (2017) used in their article can be obtained from the AEA-repository: <https://www.aeaweb.org/content/file?id=5300>

I provide two do-files for Stata for this replication study that are largely based on their syntax from the supplementary material. The files are:

- replication_cps_ieer_collischon.do
 - o This file replicates the CPS-descriptives for Table 1 in the article
- replication_psid_ieer_collischon.do
 - o This file replicates Table 1-6 and the information for Figure 2 with the PSID

In contrast to their syntax, I used some newer Stata-commands that (I think) are more intuitive to replicate their results. The following ado-files are required for this analysis:

- cdeco (which is the quantile decomposition)
- moremata (required by cdeco)
- oaxaca (for Table 4 and the gaps for Figure 2 in the paper)
- jmpierce2 (which is the decomposition used for Table 5 in the paper)
