

This readme file describes how to replicate the results of the application in “Regression discontinuity design with multivalued treatments” by Carolina Caetano, Gregorio Caetano, and Juan Carlos, *Journal of Applied Econometrics*, forthcoming.

Follow these steps, in order:

- 1- Add all files in the same folder.
- 2- Open CCE.do, and in line 10 add the path of the folder from item 1 above.
- 3- Run CCE.do. It will read the dataset medicare.dta, which was obtained originally from Card, Dobkin and Maestas (2008) at <https://www.aeaweb.org/articles?id=10.1257/aer.98.5.2242>. This .do file creates all Figures and Tables in the paper, which will appear in the same folder.

Please email us at [gregorio.caetano@gmail.com](mailto:gregorio.caetano@gmail.com) if you have any questions!
